(54) Title: METHOD FOR PREDICTION OF CARDIAC DISEASE

WO 2004/034903 A1

(57) Abstract: A method for screening patients for heart failure such as left ventricular systolic dysfunction (LVSD) comprises measuring a biomarker and taking an ECG measurement and combining both as factors to obtain a result indicative of the probability of the patient having heart failure. As a result the level of accuracy of the screening is significantly increased. Preferred biomarkers are natriuretic peptides (e.g. ANP, BNP).
